PREFACE	IX
ABOUT THE AUTHOR	XIX
I Hello World	1
1 AN INVITATION TO COMPUTER GRAPHICS	3
1.1 Brief History of Computer Graphics	5
1.2 Overview of a Graphics System	8
1.2.1 Input Devices	10
1.2.2 Output Devices	12
1.3 Quick Preview of the Adventures Ahead	15
2 ON TO OpenGL AND 3D COMPUTER GRAPHICS	19
2.1 First Program	20
2.2 Orthographic Projection, Viewing Box and World Coordinates	21
2.3 The OpenGL Window and Screen Coordinates	26
2.4 Clipping	27
2.5 Color, OpenGL State Machine and Interpolation	28
2.6 OpenGL Geometric Primitives	31
2.7 Approximating Curved Objects	37
2.8 Three Dimensions, the Depth Buffer and Perspective Projection	39
2.8.1 A Vital 3D Utility: The Depth Buffer	40
2.8.2 A Helix and Perspective Projection	42
2.9 Drawing Projects	46
2.10 Approximating Curved Objects Once More	47
2.11 An OpenGL Program End to End	51
2.12 Summary, Notes and More Reading	53
II Tricks of the Trade	55
3 AN OpenGL TOOLBOX	57
3.1 Vertex Arrays and Their Drawing Commands	58
3.2 Vertex Buffer Objects	63
3.3 Vertex Array Objects	65
3.4 Display Lists	67

CONTENTS

3.5	Drawing Text	68
3.6	Programming the Mouse	69
3.7	Programming Non-ASCII Keys	72
3.8	Menus	72
3.9	Line Stipples	73
3.10	FreeGLUT Objects	75
3.11	Clipping Planes	76
3.12	Frustum, Differently	77
3.13	Viewports	79
3.14	Multiple Windows	80
3.15	Summary, Notes and More Reading	81

III Movers and Shapers 83

4 TRANSFORMATION, ANIMATION AND VIEWING 85

4.1	Modeling Transformations	86
4.1.1	Translation	86
4.1.2	Scaling	87
4.1.3	Rotation	89
4.2	Composing Modeling Transformations	92
4.3	Placing Multiple Objects	100
4.4	Modelview Matrix Stack and Isolating Transformations	105
4.5	Animation	107
4.5.1	Animation Technicals	107
4.5.2	Animation Code	110
4.5.3	Scene Graphs	120
4.5.4	Animation Projects	121
4.6	Viewing Transformation	123
4.6.1	Understanding the Viewing Transformation	123
4.6.2	Simulating a Viewing Transformation with Modeling Transformations	130
4.6.3	Orientation and Euler Angles	136
4.6.4	Viewing Transformation and Collision Detection in Animation	138
4.7	More Animation Code	141
4.7.1	Animating an Articulated Figure	141
4.7.2	Simple Orthographic Shadows	144
4.8	Selection and Picking	145
4.8.1	Selection	145
4.8.2	Picking	148
4.9	Summary, Notes and More Reading	150

5 INSIDE ANIMATION: THE THEORY OF TRANSFORMATIONS 153

5.1	Geometric Transformations in 2-Space	154
5.1.1	Translation	154
5.1.2	Scaling	155
5.1.3	Rotation	155
5.1.4	Reflection	157
5.2	Affine Transformations	160
5.2.1	Affine Transformations Defined	160
5.2.2	Affine Transformations and OpenGL	164
5.2.3	Affine Transformations and Homogeneous Coordinates	166

5.3	Geometric Transformations in 2-Space, Continued	168
5.3.1	Affine Geometric Transformations	168
5.3.2	Euclidean and Rigid Transformations	172
5.4	Geometric Transformations in 3-Space	179
5.4.1	Translation	179
5.4.2	Scaling	179
5.4.3	Rotation	180
5.4.4	Reflection	191
5.4.5	Affine Geometric Transformations	193
5.4.6	Accessing and Manipulating the Current Modelview Matrix	195
5.4.7	Euclidean and Rigid Transformations	197
5.5	Summary, Notes and More Reading	202
6	ADVANCED ANIMATION TECHNIQUES	203
6.1	Frustum Culling by Space Partitioning	203
6.1.1	Space Partitioning	205
6.1.2	Quadtrees	205
6.1.3	Implementation	207
6.1.4	More about Space Partitioning	208
6.2	Occlusion	208
6.2.1	Querying and Culling	208
6.2.2	Conditional Rendering	211
6.3	Timer Queries and Performance Measurement	211
6.4	Animating Orientation Using Euler Angles	212
6.4.1	Euler Angles and the Orientation of a Rigid Body	212
6.4.2	Animating Orientation	213
6.4.3	Problems with Euler Angles: Gimbal Lock and Ambiguity	214
6.5	Quaternions	216
6.5.1	Quaternion Math 101	216
6.5.2	Quaternions and Orientation	219
6.6	Summary, Notes and More Reading	227
IV	Geometry for the Home Office	229
7	CONVEXITY AND INTERPOLATION	231
7.1	Motivation	231
7.2	Convex Combinations	232
7.3	Interpolation	237
7.4	Convexity and the Convex Hull	240
7.5	Summary, Notes and More Reading	245
8	TRIANGULATION	247
8.1	Definition and Justification	247
8.2	Steiner Vertices and the Quality of a Triangulation	250
8.3	Triangulation in OpenGL and the Trouble with Non-Convexity	251
8.4	Summary, Notes and More Reading	254
9	ORIENTATION	255
9.1	Motivation	255
9.2	OpenGL Procedure to Determine Front and Back Faces	256
9.3	Consistently Oriented Triangulation	261
9.4	Culling Obscured Faces	265

CONTENTS

9.5	Transformations and the Orientation of Geometric Primitives	267
9.6	Summary, Notes and More Reading	268

V Making Things Up 269

10 MODELING IN 3D SPACE 271

10.1	Curves	272
10.1.1	Specifying Plane Curves	272
10.1.2	Specifying Space Curves	275
10.1.3	Drawing Curves	277
10.1.4	Polynomial and Rational Parametrizations	280
10.1.5	Conic Sections	281
10.1.6	Curves More Formally	283
10.2	Surfaces	289
10.2.1	Polygons	289
10.2.2	Meshes	289
10.2.3	Planar Surfaces	291
10.2.4	General Surfaces	291
10.2.5	Drawing General Surfaces	293
10.2.6	Swept Surfaces	296
10.2.7	Drawing Projects	301
10.2.8	Ruled Surfaces	303
10.2.9	Quadric Surfaces	304
10.2.10	GLU Quadric Objects	307
10.2.11	Regular Polyhedra	309
10.2.12	Surfaces More Formally	313
10.3	Bézier Phrase Book	318
10.3.1	Curves	318
10.3.2	Surfaces	320
10.4	Importing Objects	324
10.5	Fractals	328
10.6	Summary, Notes and More Reading	330

VI Lights, Camera, Equation 333

11 COLOR AND LIGHT 335

11.1	Vision and Color Models	336
11.1.1	RGB Color Model	337
11.1.2	CMY and CMYK Color Models	339
11.1.3	HSV (or HSB) Color Model	340
11.1.4	Summary of the Models	340
11.2	Phong’s Lighting Model	341
11.2.1	Phong Basics	341
11.2.2	Specifying Light and Material Values	343
11.2.3	Calculating the Reflected Light	343
11.2.4	First Lighting Equation	348
11.3	OpenGL Light and Material Properties	350
11.3.1	Light Properties	351
11.3.2	Material Properties	352
11.3.3	Experimenting with Properties	353
11.3.4	Color Material Mode	356
11.4	OpenGL Lighting Model	357

11.5 Directional Lights, Positional Lights and Attenuation of Intensity . . .	359
11.6 Spotlights	361
11.7 OpenGL Lighting Equation	362
11.8 OpenGL Shading Models	363
11.9 Animating Light	364
11.10 Partial Derivatives, Tangent Planes and Normal Vectors 101	364
11.11 Computing Normals and Lighting Surfaces	371
11.11.1 Polygons and Planar Surfaces	371
11.11.2 Meshes	371
11.11.3 General Surfaces	374
11.11.4 FreeGLUT, Bézier and Quadric Surfaces	377
11.11.5 Transforming Normals	379
11.11.6 Normalizing Normals	381
11.12 Phong’s Shading Model	381
11.13 Lighting Exercises	383
11.14 Summary, Notes and More Reading	384
12 TEXTURE	385
12.1 Basics	385
12.2 Texture Space, Coordinates and Map	388
12.3 Repeating and Clamping	391
12.4 Filtering	393
12.5 Specifying the Texture Map	399
12.5.1 Parametrized Surfaces	399
12.5.2 Bézier and Quadric Surfaces	400
12.5.3 Spheres and Mercator Projection	401
12.6 Texture Matrix and Animating Textures	403
12.7 Lighting Textures	403
12.8 Multitexturing	405
12.9 Rendering to Texture with Framebuffer Objects	407
12.10 Summary, Notes and More Reading	411
13 SPECIAL VISUAL TECHNIQUES	413
13.1 Blending	413
13.1.1 Theory	413
13.1.2 Experiments	417
13.1.3 Opaque and Translucent Objects Together	418
13.1.4 Blending Textures	420
13.1.5 Creating Reflections	421
13.1.6 Motion Blur in World Space	422
13.2 Fog	422
13.3 Billboarding	424
13.4 Antialiasing Points and Lines, Multisampling Polygons	425
13.4.1 Antialiasing	425
13.4.2 Multisampling	427
13.5 Point Sprites	428
13.6 Environment Mapping: Sphere Mapping and Cube Mapping	428
13.6.1 Sphere Mapping	429
13.6.2 Cube Mapping	430
13.7 Stencil Buffer Techniques	435
13.7.1 OpenGL Buffers	435
13.7.2 Using the Stencil Buffer	436

CONTENTS

13.8 Image Manipulation	440
13.9 Bump Mapping	441
13.10 Shadow Mapping	443
13.11 Summary, Notes and More Reading	448

VII Pixels, Pixels, Everywhere 449

14 RASTER ALGORITHMS 451

14.1 Cohen-Sutherland Line Clipper	451
14.2 Sutherland-Hodgman Polygon Clipper	455
14.3 DDA and Bresenham’s Line Rasterizers	457
14.4 Scan-Based Polygon Rasterizer	462
14.4.1 Algorithms	465
14.4.2 Optimizing Using Edge Coherence – Active Edge List	468
14.5 Summary, Notes and More Reading	472

VIII Programming Pipe Dreams 473

15 OPENGL 4.3, SHADERS AND THE PROGRAMMABLE PIPELINE: LIFTOFF 475

15.1 New Pipeline for OpenGL	476
15.1.1 Shaders in the Rendering Pipeline	476
15.1.2 New OpenGL	477
15.2 GLSL Basics	479
15.3 First Core GL 4.3 Program (Dissected)	482
15.4 Animation	490
15.5 Importing Objects	492
15.6 Lighting	492
15.6.1 Per-Vertex Lighting	493
15.6.2 Per-Pixel Lighting	495
15.7 Textures	496
15.7.1 Procedural Textures	499
15.7.2 Specular Maps	500
15.7.3 Normal Maps	501
15.8 Summary, Notes and More Reading	503

16 OPENGL 4.3, SHADERS AND THE PROGRAMMABLE PIPELINE: ESCAPE VELOCITY 505

16.1 Toolbox	505
16.1.1 VAOs and Instanced Rendering Instead of Display Lists	505
16.1.2 Clipping Planes	508
16.1.3 Rest of the Toolbox	509
16.2 Shader Control Flow	511
16.2.1 Shader Subroutines	511
16.2.2 Multiple Program Objects	512
16.3 Special Visual Techniques	513
16.3.1 Blending	514
16.3.2 Points and Sprites	515
16.3.3 Remaining Effects	517
16.4 More Animation	518
16.4.1 Picking	518
16.4.2 Transform Feedback	520

16.5 Tessellation Shaders	523
16.5.1 TCS (Tessellation Control Shader)	525
16.5.2 TES (Tessellation Evaluation Shader)	527
16.5.3 TPG (Tessellation Primitive Generator)	528
16.6 Geometry Shaders	533
16.6.1 Particle System with Transform Feedback	539
16.7 Summary, Notes and More Reading	542
IX A Shader’s Web	545
17 WebGL	547
17.1 First Weberization of a Shaderized Program	548
17.2 Animation	550
17.3 Importing Objects	552
17.4 Lighting	554
17.5 Textures	555
17.6 Picking	556
17.7 Summary, Notes and More Reading	557
X Anatomy of Curves and Surfaces	559
18 BÉZIER	561
18.1 Bézier Curves	561
18.1.1 Linear Bézier Curves	562
18.1.2 Quadratic Bézier Curves	563
18.1.3 Cubic Bézier Curves	565
18.1.4 General Bézier Curves	567
18.2 Bézier Surfaces	573
18.3 Problems with Bézier Primitives: Motivating B-Splines	576
18.4 Summary, Notes and More Reading	579
XI Well Projected	581
19 APPLICATIONS OF PROJECTIVE SPACES: OpenGL’s PROJECTION TRANSFORMATIONS	583
19.1 OpenGL Projection Transformations	583
19.2 Viewing Box to Canonical Viewing Box	586
19.3 Projective Spaces and Transformations 101	587
19.3.1 Point-Line Duality on the Projective Plane	588
19.3.2 Homogeneous Coordinates on the Projective Plane	588
19.3.3 Embedding the Real Plane in the Projective Plane, Regular Points and Points at Infinity	589
19.3.4 Projective Transformations	591
19.4 Viewing Frustum to Canonical Viewing Box	597
19.4.1 Projection Matrix in the Pipeline	600
19.5 Summary, Notes and More Reading	601
XII Time for a Pipe	603
20 PIPELINE OPERATION	605

CONTENTS

20.1 Synthetic-Camera Pipeline	605
20.1.1 Pipeline: Preliminary Version	606
20.1.2 Perspective Division by Zero	607
20.1.3 Rasterization with Perspectively Correct Interpolation	610
20.1.4 Revised Pipeline	614
20.1.5 OpenGL Fixed-function Pipeline	615
20.1.6 1D Primitive Example	616
20.1.7 Exercising the Pipeline	619
20.2 Ray Tracing Pipeline	619
20.2.1 Going Global: Shadows	621
20.2.2 Going Even More Global: Recursive Reflection and Transmission	623
20.2.3 Implementing Ray Tracing	626
20.3 Radiosity	627
20.3.1 Introduction	627
20.3.2 Basic Theory	628
20.3.3 Computing Form Factors	630
20.3.4 Solving the Radiosity Equation to Determine Patch Brightnesses	632
20.3.5 Implementing Radiosity	633
20.4 Summary, Notes and More Reading	634
A MATH SELF-TEST	635
B MATH SELF-TEST SOLUTIONS	641
BIBLIOGRAPHY	649
SUBJECT INDEX	657
PROGRAM INDEX	673
